To whom it may concern,

Letter of recommendation for Dr. Gil Neuman

I am pleased to write in support of Dr. Gil Neuman's fellowship application.

Dr. Neuman commenced his residency in Ophthalmology Department at Shaare Zedek Medical Center in February 2021. We enjoyed his earnestness, enthusiasm, clinical skills and quick comprehension of the issues at stake right from the start.

Dr. Neuman excels in every task that he undertakes and is involved in every aspect of our activities, including patient care, lectures, presentations and research. He is very bright, well read and has a strong basic science background. He is also, a skillful surgeon and quick to acquire new, even complex, skills. His clinical judgment and intuition are outstanding and reliable. These virtues are coupled with kindness, professionalism, a pleasant temper and above all a caring personality.

Dr. Neuman is very well organized, punctual and articulate. He has honorably represented our department at scientific meetings, including Israeli cataract society and international ophthalmological meetings several times. In his lectures, he is always clear, thorough and adaptive to his audience, which once earned him the 'Best Paper of the Session' award at the ASCRS Annual Meeting.

Dr. Neuman has a strong and persistent desire to learn, with a passion for innovation and science. During his residency he has expressed a strong desire to conduct research and is constantly engaged in research planning and article writing. Dr. Neuman initiated several research projects and was a co-investigator in others. His background knowledge in Mathematics and Statistics was very valuable to our department.

Dr. Neuman passed his final residency examination with distinction. Besides everything else, he is a warm, helpful human being, and is greatly appreciated by the whole team. He is certainly the kind of a person who can fit comfortably into any work environment.

Altogether, I can recommend him unequivocally and expect him to join our department after the training.

Sincerely,

David Zadok, MD, MHA
